

Wastewater treatment

*reduction of pollutants as
chemical oxygen demand (COD)*

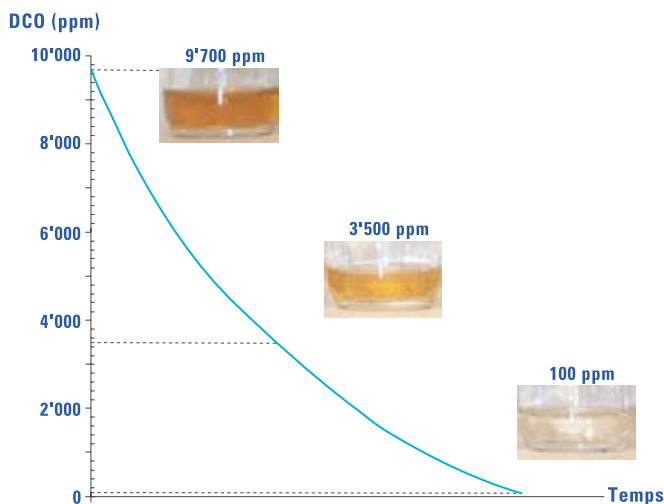

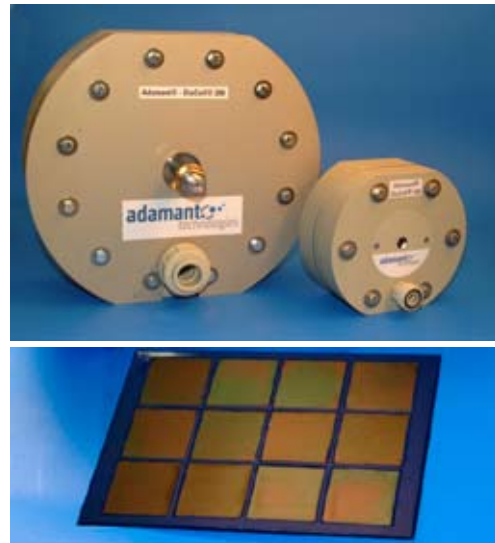

Industrial wastewater treatment

Innovative solutions for water treatment
without chemistry

DiaCell®

- Modular and compact concept based on electrolysis with doped diamond electrodes
- Innovative electrodes which provide exceptional properties, in particular chemical and mechanical resistance in various media

DiaCell® (Type 100, Type 200) and DiaMos™ technologies

- Easy to use system for an efficient destruction of organic material (including non biodegradable compounds) such as pesticides, phenols, PCBs, solvents, etc.
- Water disinfection through generation of strong oxidizing species which have residual effects on microorganism inactivation.
